

ACLS SQL v10.3.x — Release Notes

Bug Fixes, Enhancements & New Features

1. Broadcast Messages

- Fixed an issue with **Group Certificate** selection for users and supervisors.

2. Timeline Calendar

- Fixed an issue in the **Group Timeline Calendar** for staff where non-calendar resources were incorrectly included in the database query.

3. Post-Booking Usage Data Capture

New Feature — UNSW BMSF

- Enhanced the feature to support multiple project options.
- Added automatic reminders for users and staff 7 days before the data form expiry date.
- Updated access control so that the data form becomes available after the booking has ended.

5. Grid Data Table

- Disabled all **PDF data export** options.

6. Default Account in Mobile App

- Updated the account selection list to display the user's **default account as the first option**, making the default account easier and quicker to select.

7. Access Groups

- Improved access control security. The system now **denies access by default** if the required Access Group setting is undefined or missing from the user's profile, helping prevent unauthorised system access.

7. CMCA Modifications

- **Mobile App**
 - Added an indicator to identify bookings that were cancelled through the mobile app.
- **Tier Manager**
 - Added booking notes to the Tier Log table.

8. MCN Modifications

- **Service Booking Cancellation**
 - Fixed an issue where cancelling a Service Booking did not consistently cancel both the main resource booking and its associated staff time booking.
 - Resource booking: When a resource booking is cancelled through Service Booking, the associated staff time booking is also automatically cancelled.
 - Staff time booking: When a staff time booking is cancelled through Service Booking, the associated resource booking is also automatically cancelled.
- **All Operations Booking Report**
 - Added the following fields to the report:
 - **Booking Ref**
 - **Associated Booking Ref**

9. MoxyTap Safety Compliance Check

New Feature

Completed the new **MoxyTap Safety Compliance Check** feature in ACLS.

- During **Tap & Go sign-in**, users can be required to complete safety compliance questions before proceeding.
- Supports up to **5 safety compliance questions** per sign-in.

- Designed to reinforce safety and compliance requirements at the point of instrument access.
