ACLS SQL 9.4.x/9.5.x – Bug Fixes & New Features

1. Resource booking report
   - Added a global setting to include or exclude training bookings from the operation booking report.

2. SSO Service
   - Added a cyber-protection script to mitigate direct cyber attacks against instance services by safely bypassing SSO sign-in when required.

3. Resource manager
   - Added an admin-only one-click shortcut to open the resource operation calendar directly from the resource profile editor.

4. Operation calendar
   - Added an admin-only one-click shortcut to open the resource profile editor directly from the operation calendar.

5. Public holidays:
   - Public holidays are now centrally managed and maintained by the UniLab team.
   - Added booking permission controls for public holidays in: access group manager, training manager. By default, any bookings on public holidays are not permitted.

6. Preapproval calendar
   - Added ICS calendar attachments to all unapproved booking notification emails in the pre-approval workflow.

7. Double booking permisison
   - Enabled double booking in: operation/user/training calendar. This applies only when double booking permission is enabled in the resource profile.

8. Script enhancement
   - Optimised sign-in scripts to reduce initial system loading time on the first login of the day.

9. Stats customisations
   - Implemented the Consulting Service module for UNSW Stats.

10. AARHUS customisations
    - Fixed an invoice calculation bug affecting business hour calculations when bookings fall entirely outside defined business hours.

11. CMCA customisations
    - Updated email templates for the CBI module.
