ACLS SQL v9.7.x — Release Notes

Bug Fixes, Enhancements & New Features

New Features & Enhancements

1. Sample service module

- Added a new feature allowing administrators to archive unused or unwanted sample groups.

- Improves data organization and helps maintain a cleaner sample management environment.

2. Booking resource module

- Complete UI overhaul of the booking resource interface, originally planned since 2024.

- Introduced four booking status indicators for clearer operational visibility:

    - **Available** – Resource is available for booking

    - **Running Booking** – Resource currently in use

    - **Starting Soon** – Booking scheduled to begin shortly

    - **Fault / Service** – Resource unavailable due to fault or maintenance

3. MoxyTap-Space

- Introduced several new features and improvements:

- **New Features**

    - Added **custom message capability** for device displays.

    - Introduced **monthly access reports**, in addition to existing yearly reports.

- **Enhancements**

    - Improved **device UI for better usability**

    - Enhanced **device screen saver with customizable messages**

    - Added **automatic midnight sign-out** for active sessions

4. Consumable module

- Corrected the spelling errors.
