4. Booking calendar:
    - Added the enddate POST check
    - Added ical file attachment to trainer booking nofitication
    - Fixed the bug to cause the normal booking notification being sent as unapproved booking nofitication
5. Consumable order process:
    - Added consumable order collection auto-reminder, the reminder period is defined in global settings, ConsumableOrderCollectionReminderDays. default is 0 day which means collection auto-reminder is disabled.
    - Added overdue consumable order cancellation, the period is defined in global settings, ConsumableOrderCancellationDays. default is 0 day which means feature is disabled.
6. User profile editor:
    - Added booking type to the usage tab -> usage table
7. Data logbook manager
    - Added the account/project selection tips: Attention: To get account/project listing in alphabetic order when editing the bookings, please select the next user from user list and then select back the current user from the user list to trigger the account/project alphabetic listing.
7. UNSW medicine teaching:
    - Resource catalogue:
        • Added edit button in resource catalogue
        • Change asset ID column to serial number
        • Added model number column
        • Added service date column (next maintenance date)
        • Removed custodian column
8. CMCA:
    - Fixed the table header issues for batch report
    - Added balance hour expiry date check and reset to zero if expired, also send the notification to the admin for reset balance.
    - Added booking type to the user booking report
